I am a student with a strong interest in full-stack development and building practical, user-focused applications. I have completed a two-year full-stack development program, where I developed a solid foundation in both front-end and back-end technologies. This included working with modern UI frameworks, APIs, and databases. This experience helped me understand how to design, develop, and maintain end-to-end applications.

Currently, I am pursuing a degree in Information Science at Azim Premji University, where I am further strengthening my understanding of computer science concepts, problem-solving, and software development practices. I enjoy combining my academic learning with hands-on development to create efficient, scalable, and user-friendly solutions.

Experience

● Amaranth Medical Analytics

Dec/2024 - Feb/2026

As a part-time full-stack developer at Amaranth while attending college, I have been utilizing my skills to deliver responsive UIs and implement required features. I've also worked on fixing UI issues and improving the overall user experience. Additionally, I had the opportunity to use Figma for designing UI components and logos.

Over time, I was encouraged to learn Conda and worked on building APIs with database functionalities using PostgreSQL. I also gained experience with helper scripts to efficiently add and delete datasets and patients within specific projects, enabling the testing team to do their job with ease.

● One Paper lane - Ui Developer

July/2023 - Dec/2024

I worked on converting an AngularJS app to ReactJS, ensuring the front-end design remained consistent. My role included adding new features to the user interface and enhancing its usability. I also integrated APIs with the front end to ensure smooth communication between the UI and the backend.

Additionally, I ran database queries to check and verify the data displayed on the front end, which involved debugging and ensuring data accuracy. This project helped me improve my skills in ReactJS, API integration, and database handling, while ensuring the code was simple, clean, and easy to maintain.

● Sessaasai - Full Stack Developer

Dec/2022 - July/2023

I developed a gold loan dashboard using Angular with TypeScript and created the APIs with .NET. This dashboard gives a clear view of loan data, making it easier for users. I also worked on another platform, improving both the back end and front end.

By making the user interface better and fixing server-side processes, I made the user experience much better. These changes made the platform load faster and easier to use, helping users have a smooth experience. I also added new features that users needed.

Education

- Azim Premji University - APU emphasis on liberal arts, offering programs that stress critical thinking, interdisciplinary learning, and practical engagement.
 - BSc Honours (Information Sciences) *Jun/2024 - Jun/ 2028*
- Navgurukul - It is a nonprofit organization providing free software education to underserved youth.
 - Software Programming Course *Apr/2021 - Jul/ 2022*
- Open Schooling (National Institute of Open Schooling)
 - High School *Mar/2018 - Apr/2021*

Certifications

- Communication and Business Chemistry Workshop By Navgurukul *03/May/2022*
- Software Programming Course By Navgurukul *31/Jul/2022*

Projects

- Vayuwatch: Air Quality Monitor for Indian cities – urban life theme project.
- Hariyali-Squad: A simple website to present the work of the course called "Sustainable Ways of Growing Food."
- Gold Loan Dashboard: This was built for the customer to use and manage their gold loan at Sessaasai.
- Leave Management: A simple web application for employee leave management at FLURN.

Skills

- React.js
- Angular Ts
- Bootstrap CSS Framework
- Express Js
- Flutter
- Javascript
- Node.js
- Postman Api
- ORM
- C++
- MongoDB
- MySQL
- Python
- Github
- Gurobipy
